

Task 4 - Implement LOV for Job_ID, Department_ID, and Manager_ID Fields

Objective

To implement **List of Values (LOV)** for the **Job_ID**, **Department_ID**, and **Manager_ID** fields, allowing users to select valid values from predefined lists instead of entering them manually.

Description

In this task, LOVs were created and associated with the **Job_ID**, **Department_ID**, and **Manager_ID** fields in the Employees block. Each LOV retrieves data from its respective database table and displays it in a pop-up list. This helps users select valid records, improves data accuracy, and minimizes input errors.

Steps Performed

1. Opened Oracle Forms Builder.
2. Created an LOV for the **Job_ID** field using the **JOBS** table.
3. Created an LOV for the **Department_ID** field using the **DEPARTMENTS** table.
4. Created an LOV for the **Manager_ID** field using the **EMPLOYEES** table.
5. Attached the corresponding LOV to each field.
6. Tested the LOV functionality by selecting values from the list.
7. Compiled and executed the form successfully.

Result

LOVs were successfully implemented for the **Job_ID**, **Department_ID**, and **Manager_ID** fields, enabling users to select valid values from a list and ensuring accurate data entry.

Concepts Used

- Oracle Forms Builder
- List of Values (LOV)
- Record Group
- Property Palette
- HR Schema
- Data Validation
