

Task 5 - Add Total Salary Field and Create a Formula

Objective

To add a new field named **Total Salary** and calculate its value using the employee's **Salary** and **Commission Percentage**.

Description

In this task, a new calculated field named **Total Salary** was added to the Employees block. A formula column was created to calculate the total salary using the employee's salary and commission percentage. The **NVL** function was used to handle **NULL** commission values by replacing them with **0**, ensuring that the calculation works correctly for all employees.

Formula Used

`TOTAL_SALARY = SALARY * NVL(COMMISSION_PCT, 0)`

Steps Performed

1. Opened Oracle Forms Builder.
2. Added a new display item named **Total Salary**.
3. Created a formula column for salary calculation.
4. Used the **NVL** function to replace **NULL** commission values with **0**.
5. Assigned the calculated value to the **Total Salary** field.
6. Compiled and executed the form.
7. Verified the calculated values for different employee records.

Result

The **Total Salary** field was successfully added, and the calculated value is displayed automatically based on the employee's salary and commission percentage.

Concepts Used

- Oracle Forms Builder
- Formula Column
- Calculated Fields
- **NVL()** Function
- Salary Calculation
- Data Display
