

Task 1 - Create a Form Using template.fmb

Objective

The objective of this task is to create a new Oracle Form using the standard template.fmb file. The template provides a predefined structure and properties that help maintain consistency across Oracle Forms applications.

Description

In Oracle Forms Builder, the template.fmb file was opened and saved with a new form name. The form was configured and compiled successfully. Using the template ensures that standard settings, visual attributes, and form properties are inherited, reducing development effort and maintaining uniformity.

Steps Performed

1. Opened Oracle Forms Builder.
2. Opened the template.fmb file.
3. Saved the form with a new name.
4. Verified form properties and layout.
5. Compiled the form.
6. Executed the form successfully.

Result

A new Oracle Form was successfully created using template.fmb and is ready for further development such as adding data blocks, canvases, LOVs, triggers, and other form components.

Concepts Used

- Oracle Forms Builder
- Form Module Creation
- Template-Based Development
- Form Compilation and Execution
