

Task 6 - Create a Summary Column to Display Department Total

Objective

To create a **Summary Column** that calculates and displays the total salary of all employees within a department.

Description

In this task, a **Summary Column** was created in Oracle Forms to calculate the total salary for employees in each department. The summary column automatically sums the salary values of all employee records displayed in the detail block, providing an overall department salary total.

Steps Performed

1. Opened Oracle Forms Builder.
2. Selected the Employees detail block.
3. Created a new **Summary Column**.
4. Selected the **SUM** function for calculation.
5. Chose the **Salary** field as the source item.
6. Specified the appropriate group for the summary calculation.
7. Added the summary item to the form layout.
8. Compiled and executed the form.
9. Verified that the total salary updates based on the selected department.

Result

A **Summary Column** was successfully created to display the total salary of employees for each department. The total is updated automatically whenever a different department is selected.

Concepts Used

- Oracle Forms Builder
- Summary Column
- Aggregate Function (SUM)
- Master-Detail Relationship
- Employees Block
- Departments Block
