

Task 3 - Create Detail Block using Employees Table

Objective

To create a Detail Data Block based on the **EMPLOYEES** table and establish a Master-Detail relationship with the **DEPARTMENTS** master block.

Description

A Detail Block was created using the Data Block Wizard by selecting the **EMPLOYEES** table as the data source. The detail block was then linked to the **DEPARTMENTS** master block through the **DEPARTMENT_ID** column. This relationship ensures that only employees belonging to the selected department are displayed.

Steps Performed

1. Opened Oracle Forms Builder.
2. Started the Data Block Wizard.
3. Selected the **EMPLOYEES** table.
4. Chose the required columns:
 - Employee_ID
 - First_Name
 - Last_Name
 - Email
 - Phone_Number
 - Hire_Date
 - Job_ID
 - Salary
 - Commission_Pct
 - Manager_ID
 - Department_ID
5. Generated the detail block.
6. Created the layout using the Layout Wizard.
7. Established a Master-Detail relationship between:
 - Master Block: Departments
 - Detail Block: Employees
 - Join Column: Department_ID
8. Compiled and executed the form.

Result

A Detail Block was successfully created using the **EMPLOYEES** table. When a department is selected in the Master Block, only the employees belonging to that department are displayed in the Detail Block.
